

## Learning never stops

One of the primary objectives of Pakistan Association of Orthodontists is to promote the science and art of orthodontics. The association holds periodic meetings, courses, seminars and conferences for orthodontic continuing education in an effort to make orthodontists and residents life-long learners. We also serve community professionals with value-added expertise in conference and workshops, to improve their career.

It's good to catch up with colleagues and make new acquaintances at professional conferences and other events. There's no substitute for a quality network, and the contacts made at these events can be incredible resources. The relationships you build at events can help you in myriad ways. Along with relationship-building, conference attendees are exposed to informative sessions on such varied topics as making difficult decisions.

Please make time to be a part of the 9<sup>th</sup> International PAO Conference, regardless of your position within your organization. Your continued education, along with sharing experiences, successes and failures, will serve to grow our body of knowledge as a whole, and benefit each of us individually and collectively.

Looking forward to welcome all of you at the conference in Karachi.
